

Curriculum					
Modules	Topic	Sub topic	Detail	Outcome	Duration Min
1	AWS Fundamentals	AWS Global Infrastructure	Regions, Availability Zones, Edge Locations	Understand AWS's global structure	30
		AWS Management Console	Navigation, Services Overview	Navigate AWS console efficiently	30
		AWS CLI and SDK	Basic commands, SDK setup	Use AWS programmatically	45
2	Identity and Access Management (IAM)	Users, Groups, Roles	Creating and managing identities	Manage AWS access securely	45
		Policies	Policy structure, types	Create and apply IAM policies	45
		MFA and Best Practices	Securing root account, MFA setup	Implement IAM security best practices	30
3	Compute Services	EC2	Instance types, AMIs, EBS	Launch and manage EC2 instances	60
		Auto Scaling	Scaling policies, launch configurations	Implement auto scaling for EC2	45
		Elastic Beanstalk	Application deployment, environments	Deploy applications using Elastic Beanstalk	45
		Lambda	Serverless functions, triggers	Create and manage Lambda functions	60
4	Networking	VPC	Subnets, route tables, internet gateways	Design and implement VPCs	60
		Security Groups and NACLs	Inbound/outbound rules, stateful vs	Secure AWS network resources	45
		Route 53	DNS management, routing policies	Configure DNS and routing in AWS	45
5	Storage Services	S3	Buckets, objects, storage classes	Manage object storage in AWS	60
		EBS	Volume types, snapshots	Use block storage with EC2	45
		EFS	File systems, mount targets	Implement shared file storage	45
6	Database Services	RDS	Supported engines, instance management	Deploy and manage relational databases	60
		DynamoDB	Tables, items, queries	Use NoSQL databases in AWS	60
		ElastiCache	Redis, Memcached	Implement in-memory caching	45
7	Application Integration	SQS	Queues, message processing	Implement decoupled applications	45
		SNS	Topics, subscriptions	Set up pub/sub messaging	45
		API Gateway	RESTful APIs, WebSocket APIs	Create and manage APIs	45
8	Monitoring and Management	CloudWatch	Metrics, alarms, logs	Monitor AWS resources and applications	60
		CloudTrail	Event history, trail configuration	Track user activity and API usage	45
		AWS Config	Resource inventory, configuration history	Assess, audit, and evaluate configurations	45
9	Security and Compliance	AWS WAF & Shield	Web application firewall, DDoS protection	Protect web applications	45
		KMS	Key management, encryption	Manage encryption keys in AWS	45
		CloudHSM	Hardware security modules	Implement compliant key management	30
10	DevOps on AWS	CodeCommit	Version control	Manage source code in AWS	30
		CodeBuild	Build service	Compile and test code in AWS	30
		CodeDeploy	Automated deployment	Deploy applications to various compute services	45
		CodePipeline	Continuous delivery	Create end-to-end delivery pipelines	45
11	Containers on AWS	ECS	Container management	Run Docker containers in AWS	60
		EKS	Kubernetes service	Deploy Kubernetes clusters in AWS	60
		ECR	Container registry	Store and manage Docker images	30
12	Serverless Architecture	SAM	Serverless application model	Develop serverless applications	60
		Step Functions	State machines	Coordinate microservices	45
13	Big Data and Analytics	Redshift	Data warehousing	Analyze large datasets	45
		EMR	Hadoop framework	Process big data	45
		Athena	Interactive query service	Query data in S3 using SQL	30
14	Machine Learning	SageMaker	ML model development	Build, train, and deploy ML models	60
		Comprehend	Natural language processing	Extract insights from text	30
